

2011 Green Grand Prix regulations and structure. categories for fuel economy competition

We have two SCCA fuel economy / TSD rallies for you to choose from - a 50 mile event or a 100 mile event. They will both take place on the morning of Fri. April 15th.

Both rallies will be conducted on the WGI 2.45 mile short course.

You choose which length event you'd like to enter. We will most likely put pure EVs in the 50 miler. Awards will be presented for many categories of vehicles. We may add new categories as more vehicles enter. **Please see the rally information below** along with our categories of competition. Our rallies are named in honor of Doris Bovee, who was an SCCA member and environmentalist.

All rally vehicles must be registered for the road and pass a basic SCCA inspection. This event is a sanctioned SCCA rally hosted by the Glen Region chapter.

If your vehicle has two seats you must have a navigator. All crews on board must be licensed drivers at least 18 yrs. of age and navigator at least 16.

Both rallies will be Time-Speed-Distance events. You will travel between 49mph and 55 mph for a certain number of laps. Both rallies will include a mandatory stop in the pits for a short specified time. We will be recording your actual finish time in comparison with our calculated finish time for you.

The Glen circuit provides a safe, challenging venue with significant elevation changes.

Passing is permitted, but no drafting or blocking maneuvers allowed!

Determination of fuel economy results:

Hybrid vehicles will use onboard computer readings to determine mpgs.

Other vehicles will be weighed immediately before and after the rally to determine fuel use.

We will post rally winners in all categories, their distance traveled, and mpgs on our website www.greengrandprix.com

All vehicles are invited stay if owners so choose and be on display in the Tech garage during WGI's Opening Weekend (April 16 and 17) at no charge. This is traditionally very well attended. You are invited to set up a table or display if you'd like!

Categories of Competition

(based on EPA combined highway/city ratings)

We will add special categories including Modifieds (example: 4-M) as needed

1. Vehicles rated at 26 mpg and under
